Art Unit: 3673

The indicated allowability of claims 26-29 and 32 is withdrawn in view of the newly discovered reference(s) to U.S. Pat. No. 4,483,501 to Eddy and U.S. Pat. No. 4,727,890 to Vincent. Rejections based on the newly cited reference(s) follow. The Examiner regrets any inconvenience.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 27-29 and 32 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Pat. No. 4,186,501 to Eddy.

Claim 27, Eddy discloses a caddy for use with furniture comprising a cushioning object supported by a cushion support structure, said caddy comprising:

a first member 12;

a second member 14 connected to said first member, wherein one of said first and second members is insertable between the cushioning object and the cushion support structure of the furniture so as to define a captured portion of the caddy when inserted between the furniture cushioning object and cushion support structure, wherein the other of said first and second members defines a free portion of the caddy when said captured portion is inserted between the furniture cushioning object and cushion support structure, and wherein said free portion includes an extensible segment for adjusting the length of said free portion (col. 2-3 lines 68 & 1-2)(fig. 4), whereby said

free portion is disposed substantially vertically when said captured portion is inserted between the furniture cushioning object and cushion support structure;

a receptacle 30 having an open end for releasably receiving at least one item therein; and

means 28 for connecting said receptacle to said free portion whereby a user of the caddy is inherently capable of orienting said open end of said receptacle upwardly regardless of whether said free portion extends upwardly or downwardly with respect to said captured portion. With regards to the receptacle being used to hold sundries, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 370 F.2d 576, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 312 F.2d 937, 939, 136 USPQ 458, 459 (CCPA 1963).

Claim 28, Eddy discloses a caddy for use with furniture comprising a cushioning object supported by a cushion support structure, said caddy comprising: a first member 12;

a second member 14 hingedly connected to said first member (col. 2 lines 24-30), wherein one of said first and second members is insertable between the cushioning object and the cushion support structure of the furniture so as to define a captured portion of the caddy when inserted between the furniture cushioning object and

cushion support structure, and wherein the other of said first and second members defines a free portion of the caddy when said captured portion is inserted between the furniture cushioning object and cushion support structure, whereby said free portion is disposed substantially vertically when said captured portion is inserted between the furniture cushioning object and cushion support structure;

a receptacle 30 having an open end for releasably receiving at least one sundries item therein; and

means 28 for connecting said receptacle to said free portion whereby a user of the caddy is inherently capable of orienting said open end of said receptacle upwardly regardless of whether said free portion extends upwardly or downwardly with respect to said captured portion. With regards to the receptacle being used to hold sundries, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 370 F.2d 576, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 312 F.2d 937, 939, 136 USPQ 458, 459 (CCPA 1963).

Claim 29, Eddy discloses a caddy for use with furniture comprising a cushioning object supported by a cushion support structure, said caddy comprising:

a first member 12;

a second member 14 connected to said first member, wherein one of said first and second members is insertable between the cushioning object and the cushion support structure of the furniture so as to define a captured portion of the caddy when inserted between the furniture cushioning object and cushion support structure, and wherein the other of said first and second members defines a free portion of the caddy when said captured portion is inserted between the furniture cushioning object and cushion support structure, whereby said free portion is disposed substantially vertically when said captured portion is inserted between the furniture cushioning object and cushion support structure; a receptacle 30 having an open end for releasably receiving at least one sundries item therein; and

means for permanently connecting 24 said receptacle to said free portion whereby a user of the caddy is inherently capable of orienting said open end of said receptacle upwardly regardless of whether said free portion extends upwardly or downwardly with respect to said captured portion. With regards to the receptacle being used to hold sundries, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 370 F.2d 576, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 312 F.2d 937, 939, 136 USPQ 458, 459 (CCPA 1963).

Claim 32, Eddy discloses a caddy for use with furniture comprising a cushioning object supported by a cushion support structure, said caddy comprising:

a first member 12;

a second member 14 connected to said first member, wherein one of said first and second members is insertable between the cushioning object and the cushion support structure of the furniture so as to define a captured portion of the caddy when inserted between the furniture cushioning object and

cushion support structure, and wherein the other of said first and second members defines a free portion of the caddy when said captured portion is inserted between the furniture cushioning object and cushion support structure, whereby said free portion is disposed substantially vertically when said captured portion is inserted between the furniture cushioning object and cushion support structure;

a receptacle 30 having an open end for releasably receiving at least one sundries item therein; and

means 28 for releasably connecting said receptacle to said free portion whereby a user of the caddy is inherently capable of orienting said open end of said receptacle upwardly regardless of whether said free portion extends upwardly or downwardly with respect to said captured portion, wherein said means for releasably connecting said receptacle to said free portion comprise a pocket attached to said receptacle, said pocket having an open end facing in a direction substantially opposite said open end of said receptacle, said pocket being operable to receive one end of the free portion when the caddy is disposed in a first operative orientation and the opposite end of the free

Application/Control Number: 10/696,609

Art Unit: 3673

portion when the caddy is disposed in an inverted second operative orientation. A pocket is interpreted as receptacle, cavity of opening, therefore, the loop 28 taught by Eddy clearly meets the limitation of a pocket as recited in the claim. With regards to the receptacle being used to hold sundries, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 370 F.2d 576, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 312 F.2d 937, 939, 136 USPQ 458, 459 (CCPA 1963).

Page 7

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 26 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. No. 4,483,501 to Eddy in view of U.S. Pat. No. 4,727,890 to Vincent.

Claim 26, Eddy discloses a caddy for use with furniture comprising a cushioning object supported by a cushion support structure, said caddy comprising:

a first member 12:

a second member 14 connected to said first member, wherein one of said first and second members is insertable between the cushioning object and the cushion support structure of the furniture so as to define a captured portion of the caddy when inserted between the furniture cushioning object and cushion support structure, and wherein the other of said first and second members

defines a free portion of the caddy when said captured portion is inserted between the furniture cushioning object and cushion support structure, whereby said free portion is disposed substantially vertically when said captured portion is inserted between the furniture cushioning object and cushion support structure;

a receptacle 30 having an open end for releasably receiving at least one sundries item therein; and

Application/Control Number: 10/696,609

Art Unit: 3673

means 28 for connecting said receptacle to said free portion whereby a user of the caddy is inherently capable of orienting said open end of said receptacle upwardly regardless of whether said free portion extends upwardly or downwardly with respect to said captured portion. With regards to the receptacle being used to hold sundries, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See In re Casey, 370 F.2d 576, 152 USPQ 235 (CCPA 1967) and In re Otto, 312 F.2d 937, 939, 136 USPQ 458, 459 (CCPA 1963). Eddy fails to disclose the second member releasably connected to the first member. Vincent discloses a caddy having first and second members releasably connected together (col. 1 lines 55-58). It would have been obvious for one having ordinary skill in the art at the time of the invention to have the fist and second members releasably connected together as taught by Vincent in order to detach the first member from the second member of Eddy.

Page 9

Allowable Subject Matter

Claims 17-19 and 30-31 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to FREDRICK C. CONLEY whose telephone number is 571-272-7040. The examiner can normally be reached on M-TH.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, HEATHER SHACKELFORD can be reached on 571-272-7049. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
